

MODULE 06 — Repository Link

Version Control with Git & AI Workflows

Name: MD Jobael Haque (Arif) ID: 01675979838 Batch: 21
 Course: AI Driven SQA — Manual & Automation Testing | OSTAD

Assignment Brief: 1) Version Control with Git & AI Workflows. 2) Submit the GitHub repository link for each module containing the respective assignment.

Submission Guideline: Module Name: Repository link

Q1. Version Control with Git & AI Workflows

All previous module assignments were brought under Git version control and published to a single GitHub repository, using the workflow below.

1. Objective

Bring all previous module assignments (Module 01–05) under Git version control and publish them to a single GitHub repository, so each module's work is tracked with a clear commit history and can be shared as one repository link.

2. Repository Structure

```
AI-SQA-Assignments/
├── README.md           (Index of all modules)
├── Module_01/README.md (Introduction to AI-Driven SQA)
├── Module_02/README.md (SDLC in the Age of AI)
├── Module_03/README.md (STLC with AI)
├── Module_04/README.md (JavaScript + Node.js practice)
├── Module_05/README.md (Claude Code + JS problem solving)
└── Module_06/README.md (This document – Git & AI workflow)
```

One repository was used for all modules, rather than five separate repos, so the full history of the coursework is visible in a single place, with each module organized into its own folder.

3. Git Workflow Used

Step 1 — Initialize the Repository

```
git init
git branch -M main
```

Step 2 — Add Files Module by Module and Commit Incrementally

Committing one module at a time (instead of one large dump) keeps the commit history readable and documents progress module-by-module:

```
git add Module_01
git commit -m "Add Module 01: Introduction to AI-Driven SQA"

git add Module_02
git commit -m "Add Module 02: SDLC in the Age of AI"

git add Module_03
git commit -m "Add Module 03: STLC with AI"

git add Module_04
git commit -m "Add Module 04: JavaScript + Node.js practice"

git add Module_05
git commit -m "Add Module 05: Claude Code + JS problem solving"

git add Module_06 README.md
git commit -m "Add Module 06: Git and AI workflow documentation"
```

Step 3 — Connect to GitHub and Push

```
git remote add origin https://github.com/jobaelhaquearif/AI-SQA-Assignments.git
git push -u origin main
```

4. Where AI Fit Into the Workflow

- Used to draft clear, conventional commit messages that describe what changed and why, instead of vague messages like "update".
- Used to convert the original assignment write-ups into clean Markdown so they render properly on GitHub instead of as raw HTML.
- Used to write the Module 06 documentation as a short, reviewable record of the Git workflow, which is itself good practice before pushing to a shared repository.

Q2. Submit the GitHub Repository Link for Each Module

1. Submission Table

Per the submission guideline ("Module Name: Repository link"), since all modules live in one repository, the same link is used for every row below.

Module	Content	Repository Link
Module 01	Introduction to AI-Driven SQA	https://github.com/jobaelhaquearif/AI-SQA-Assignments
Module 02	SDLC in the Age of AI	https://github.com/jobaelhaquearif/AI-SQA-Assignments
Module 03	STLC with AI	https://github.com/jobaelhaquearif/AI-SQA-Assignments
Module 04	JavaScript + Node.js practice	https://github.com/jobaelhaquearif/AI-SQA-Assignments
Module 05	Claude Code + JavaScript problem solving	https://github.com/jobaelhaquearif/AI-SQA-Assignments
Module 06	Git & AI workflow documentation	https://github.com/jobaelhaquearif/AI-SQA-Assignments
